

1. Features

- Isolated RS232C interface for HAPCAN system. It can also work as a controller of devices with RS232C ports.
- Works with USB-RS232C adaptors.
- It has got surge protectors built-in on the serial port side.
- Operation voltage 10-24V
- Current consumption 28mA
- For DIN rail mounting.
- Dimensions 90x58x36 mm (2 mod)
- Operating of module depends on firmware uploaded into it.

3. Technical data

Bus side

Parameter	Symbol	Value	Unit
Power supply voltage	U_s	10-24V	V
Current consumption	I_s	66@10V, 28@24V	mA
Bus connector type		2x RJ45 connectors	

Serial port side

Parameter	Unit
Connector	3 pole terminal block
Isolation voltage	2500V RMS @ 1min
Maximum baud rate	460kbps

5. Commissioning

5.1. CPU voltage measurement

After verifying the correctness and quality of the soldering, the bus voltage should be connected while measuring the processor voltage. To do this, connect a voltmeter to pins 2 and 3 of the ICSP connector. Processor supply voltage should be about 5V.

Figure 4. CPU voltage measurement

5.2. Checking the CPU clock

Proper operation of the CPU can be checked by temporarily connecting the LED to pins 3 and 5 of the ICSP connector. When device is powered, the LED should light up four times in the sequence 0.5 second on - 0.5 second off. The LED lights up only once for 50ms if processor is in the programming mode.

Figure 5. Checking the CPU clock

5.3. Firmware uploading

The device requires a firmware uploading for proper operation. It can be done with HAPCAN Programmer software. Both, firmware and HAPCAN Programmer can be downloaded from hapcan.com website.
